

# eSMS **Web-based Server System**

**eSMS** is a versatile system that allows the whole company to communicate with staff who are either on the move or with client(s) at a speed, faster than they can access their email.

**eSMS** is a 2-ways Extended Messaging System which cater for the medium to large enterprises. It allows your employees to send SMS/EMS via their Desktop PC, Notebooks, PDA, or Smart phone from any place where they can access to Wifi or Internet.

**eSMS** allows your data to be securely stored within your company without the fear of a third party stealing and selling your contacts to your competitors. It has a comprehensive transaction logging feature.

Even when you are overseas, sending SMS back to your home or to your office is as cheap as sending local SMS. Celcom's special package allows you to send SMS at as low as 2 sen\*

Our **eSMS** has multiple features and can be further customized if required to cater for your business needs.
